github.com/BIGBEASTISHANK bigbeastishank.com

Profile

Highly versatile software engineer building software and low-level systems with Rust, with strong expertise in full-stack development using Next.js and modern web technologies. Experienced in developing games and interactive experiences using Unity and Unreal Engine, with a passion for systems programming, web development, and game technology.

Experience

- **Chief Technology Officer (CTO)** **2025 – 2026**
  Devsora – DeepTech & Innovation Solutions
  Led the technical direction of Devsora, focusing on technology strategy, product development, and implementation of technical solutions.
- **Full Stack Development Intern** **Jan 2026 – Apr 2026**
  Atal Incubation Center – Manipal University Jaipur (AIC-MUJ)
  Completed a 3-month paid internship focused on full-stack web development, contributing to the development and implementation of web-based solutions.

Education

- **B.Tech – Computer Science Engineering (IoT & IS) – 6.22 CGPA** **2028**
  Manipal University Jaipur
- **Class XII – 60%** **2024**
  LBS Convent, Kota, Rajasthan
- **Class X – 80.2%** **2022**
  Open Minds A Birla School, Patna, Bihar

Featured Projects

- **bigbeastishank.com** GitHub
  Tech Stack: **React.js, Next.js, TypeScript, Tailwind CSS, MongoDB.**
  Personal portfolio and web platform (Full stack) with multiple versions and styles, including blog functionality
- **Dumbotron Artificial Unintelligence** GitHub
  Tech Stack: **Python, PyTorch, CUDA, SentencePiece, NumPy**
  Built a Transformer-based LLM from scratch in **PyTorch**, implementing self-attention, feed-forward networks, positional encoding, token embeddings, SentencePiece tokenization, training, and text generation
- **SignifyAI** GitHub
  Tech Stack: **React.js, Next.js, TypeScript, Tailwind CSS, FastAPI, Faster Whisper, OpenRouter AI, Python**
  AI-powered translator that converts spoken audio/video input into American Sign Language (ASL) gestures in real time using deep learning and computer vision. Supports gesture animation, cloud accessibility, and multilingual rendering
- **Passforge** GitHub
  Tech Stack: **Rust, Serde**
  Secure password manager built in Rust with CLI support for storing, managing, and generating passwords with encryption

Additional Projects

- **Crisis Compass – Next.js, TypeScript, MongoDB, Tailwind, Python/Flask, Random Forest** GitHub
  AI-powered disaster response platform for severity prediction, intelligent resource allocation, and real-time coordination between response agencies.
- **MUJ Tasks – Next.js, TypeScript, MongoDB, Tailwind CSS** GitHub
  Centralized platform enabling MUJ students to request and provide assistance with assignments, lab manuals, and CSE projects.
- **HackathonPPTSubWeb – Next.js, TypeScript, MongoDB, Tailwind CSS** GitHub
  Web-based hackathon submission system for collecting participant details and securely uploading presentation files to Google Drive.
- **Cosmic Explorer – Next.js, TypeScript, MongoDB, Tailwind CSS** GitHub
  Interactive space exploration dashboard providing data on the ISS, Mars weather, potentially hazardous asteroids, and daily space highlights.
- **Reform India – Next.js, TypeScript, Tailwind CSS** GitHub
  Open-source platform for documenting, discussing, and evaluating proposed reforms in governance, policing, media, and public institutions.
- **Drag Your Tires – Unity, C#** GitHub
  High-speed racing game focused on precision drifting, challenging tracks, and skill-based driving mechanics.
- **Shimrun Dash – Unity, C#** GitHub
  Fast-paced obstacle-dodging game inspired by Geometry Dash, featuring timing-based gameplay and progressively challenging obstacles.
- **Sussy Shooter – Unity, C#** GitHub
  Action shooter featuring enemy combat, exploration of hidden areas, and strategic objectives leading to a final target.
- **Beast Race – Unity, C#** GitHub

Arcade-style car racing game featuring high-speed tracks, course completion objectives, and driving mechanics.

- **Dotfiles / Syscopy** – **Bash** GitHub
  Bash-based setup tool for replicating custom Arch Linux dotfiles, software configurations, and system environment.
- **BBeast Discord Bot** – **C++, JavaScript, Python** GitHub
  Discord bot built for community engagement, moderation assistance, server organization, and maintaining a safer community environment.

Achievements

- **Mentor & Judge (Round 2) – Code-e-Manipal 2.0 (2026):** Guided participants in technical problem-solving and assessed project submissions based on innovation, technical implementation, and overall execution.
- **Winner – MUJ HackX 3.0 (2025):** Built SignifyAI, an AI system that converts speech to ASL gestures.
- **Winner – IEEE Recurz Hackathon (2026):** Developed a dynamic learning platform where AI learn from the user's mistakes and improves over time with user.
- **Special Mention (4th) – International Innovation Challenge Hackathon 3.0 (2026):** Developed secure file transfer protocol with multi layer encryption that communicate only in Layer 2.
- **Finalist – International Innovation Challenge Hackathon (2024):** Developed a spacecraft health monitoring concept using Raspberry Pi and sensors.
- **4th Place – Pixel Palettes Hackathon:** Developed a full-stack disaster management platform featuring severity prediction, smart resource allocation, and response-team collaboration.
